

MEMORANDUM FOR: Project Review Committee

SUBJECT : Electric Power Facilities at the [REDACTED]

25X1A6a

1. The DD/A Office is currently faced with the problem of providing to the [REDACTED] electric power facilities which are adequate for present use, for future expansion, and for emergency conditions.

5X1A6a

2. Present power facilities at [REDACTED] are operating at an overload and, with the continuing addition of required communications equipment plus installation of an approved water supply system, power now available will become inadequate for both daily and emergency demands (Tab A). A survey undertaken by the Office of Communications and by the Logistics Office recommends increasing commercial and stand-by electric power facilities to provide the required power. It is estimated that \$15,000 will be needed for this purpose. (Tab B).

25X1A6a

3. At [REDACTED] auxiliary stand-by power is not presently made available to certain station facilities of a critical nature (Tab A). It is estimated that purchases of communications equipment for \$18,000 will overcome this deficiency (Tab C).

4. It is recommended that the Director approve increasing the electric power facilities of the [REDACTED] as proposed in the attached staff study (Tab A) and that funds in the amount of \$33,000 be authorized for this purpose.
